البروفسور دغفين فوليسدال في سطور

Prof. Dagfinn Føllesdal was born in 1932. He studied science and mathematics in Oslo and Göttingen and philosophy at Harvard University. He obtained his Ph.D. in 1961. then joined Harvard and taught there until 1967, where he joined Oslo University. He is also a professor at Stanford University since 1968, where he became in 1976 a C.I. Lewis Professor. He has written or edited more than 20 books, including Husserl und Frege (1958), Referential Opacity and Modal Logic (1961, 2004) and Philosophy of Quine (5 Volumes, edited in 2001); and about 100 articles on philosophy of language, philosophy, philosophy of humanities and social sciences, and ethics. He was the president of the Norwegian Academy of Sciences and a member of the Academy. He is an honorary member of Palestine Academy for Science and Technology and a supporter to Palestinians. Professor Føllesdal lectures on issues in the philosophy of language, philosophy of social sciences and humanities, philosophy of mathematics and phenomenology, climate change and issues in ethics.
